About the company

Since 1990, Compass Srl is specialized in turned and milling mechanical parts. Flexible manufacturing processes allows for production of batches ranging from 50 to 10.000 pieces and the development of prototypes and samples. All pieces are manufactured according to the specification of the customer and using any material. If requested, the pieces can be delivered with heat and surface treatments, which are processed by external certificated contractors. In addition to the production of mechanical pieces, Compass Srl supplies assembled and controlled mechanical groups.

Precision mechanics

Milling

Sheet metal pressing

About the company

Costam Hi-Tech S.r.l. specializes in the production of high-precision mechanical components. Thanks to its production flexibility, it meets customers' demand, both for small batches and large series. Through continuous investment in high-qualified staff and equipment, it has established at European level in a highly competitive market. Costam Hi-Tech S.r.l. works with all standard materials, as well as specific ones. It is available as prime contractor for complete supplies: its activities include sheet metal pressing, dies construction, milling, mechanical machinings, turning, assembly, other processing.

Precision mechanics
Turning and milling

About the company

Intermek features an innovative approach to mechanical lathe, turning and milling. Thanks to its efficient production line, it is able to deliver orders in 48 hours. It addresses a whole range of materials, from metals to polymers, paying particular attention to stainless steel, aluminium and titanium alloy productions. It offers many optional services, such as tooling templating, prototyping, rapid simulation through 3D printing models, co-design of the product, cost optimization of machining, designing and construction for small, automated machines to optimize assemblies.

Lavorazioni Meccaniche Pignat Srl

Turning
Milling
Assembling

About the company

Lavorazioni Meccaniche Pignat S.r.l. works in the precision mechanics and offers a complete range of services to meet various requirements: precision machining, deburring of metal alloys and plastic materials, handling of any thermal and surface treatments, post-completion machining, unit assembly, testing and supply with certificates of compliance, construction of special equipment, collaboration for prototype industrialisation. In addition, the company has developed an in-house product patented in 1978: hydraulic quick-release couplings.

Mechanical components
Assembled groups

About the company

Meccanica Hi Tech Srl operates in different mechanical sectors, providing customers with technical and logistical support in the production of mechanical components. It manages the entire production cycle, paying particular attention to product quality and timing. MHT srl realizes finished mechanical parts according to drawings, with or without the supply of the material, the construction of machines and their systems, and assembled groups according to customer's specifications.

Precision mechanics
Machine production

About the company

Meccaniche del Mistro represents the passionate evolution of the regional manufacturing sector. It was born as a company specialized in the production of machinery for the processing of scissors and knives blades. It is now an efficient company designing and creating high-quality machineries and equipment for the production of cutting blades. The company uses the most innovative technologies for designing, planning and machine management. Services offered include precision mechanics, machine production, laser cutting, assembly and warehouse.

Turning
Milling

About the company

Since 2003, MEC+ Srl supports its clientele from co-design to the industrialization of the product. Thanks to its high-tech machinery, it offers exceptional turning and milling services. Materials worked are stainless steel, aluminium, plastics, titanium, brass and bronze. In addition, it realizes specific customizations, small assemblages and laser markings on the components produced (e.g. logos, serial numbers, details). MEC+ Srl pays particular attention to the quality of each phase to guarantee the supply of advanced, resistant, reliable mechanical components that meet the customer's requirements.

About the company

MetalForm Friuli is an advanced company in the field of sheet metal and stainless-steel working, guaranteeing quality in every phase of the process. Services offered are light metalwork, laser cutting, welding, bending, punching, mechanical processing. In addition, Metalform is equipped for satin finishings, polishing, drooling, turning and milling. Moreover, it designs and realizes industrial automation systems for assembly, handling, testing, functional tests, special machineries and more.

Metallic carpentry

About the company

METAL SRL was born at the end of the 90's to meet the needs of outsourcing of a big metal mechanic group which were facing sudden work peaks. During the first years it was limited to metal components assembly through riveting, tacking and welding. Afterwards, the company supplied also the bending, calendering and beading phases. More than twenty years after its birth, it owns the whole production chain offering the following services: designing, laser-cutting, punching, panelling, bending, spot welding, TIG/MIG welding, grinding and polishing, assembling, ballooning, logistics.

Modulmec Ingranaggi Srl

Mechanical parts
Gears production

About the company

MODULMEC INGRANAGGI srl specializes in the construction of mechanical parts related to motion transmission. It is a technologically advanced company, at the forefront in the research of technical solutions, developing customized products on specific customer requests. Services offered comprises technical support and development, turning, milling, broaching, tothing, grinding on external and internal diameters, grinding on external teeth until class 2, Leitz Reference XI machine for tridimensionality checks and reports.

Industrial automation and machine tools

Sandblasting, coating, carpentry

Constructions, mechanical and electrical industrial maintenance

About the company

The group **Officine Borghese** comprises By Errebi, Bormec and Phebor, three companies with over twenty years of experience, from which it inherits the know-how and competences. The group is the best partner in the manufacturing sector for high quality industrial production: it is specialized in solutions development, design of industrial automation and machine tools, mechanical and electrical maintenance, sandblasting, painting and carpentry.

by errebi: Mechanical and electrical design, simulation with 3D software, prototyping, construction and start-up of machine tools, numerical control machines, feasibility study, robotized islands, production lines, special lifting hooks, construction of replacement details

Bormec: Industrial carpentry, electrowelded structures, sandblasting, non-corrosive liquid and powder painting, epoxy primers, polyurethane finishes, high-temperature-resistant paints;

Phebor: industrial electromechanical constructions and installations, mechanical and electrical maintenance, hydraulic, electrical, civil, industrial systems, faults identification, machines implementation and movement;

Mechanical components

Turning

Milling

About the company

OMEG Snc operates in the precision mechanics sector using the latest technological innovations in the machine tool industry. It is specialized in small and medium series of medium to large complex mechanical parts, such as front turning, longitudinal turning and milling. With the support of external companies, it offers other services such as welding, heat treatments, tooling and other machining.

Precision mechanics
Assembling

About the company

Premek Hi Tech focuses on precision mechanics and assembling in accordance with customer's design. The company specializes not only in machining stainless steel and aluminum, but also on bronze, brass, plastics and special materials such as titanium, Inconel and Hastelloy. In addition to turning and milling, it performs complementary operations as drilling, threading, boring, broaching, punching, bending and grinding. Part of the production is dedicated to the assembly of mechanical systems, in two different areas: the *department of assembly* dedicated to medium and large sizes; the *Clean Room* for the assemblies of small components.

About the company

The company specialises in the turning of precision mechanical parts. It has a broad range of latest generation CNC bar feeder, turret and sliding headstock lathes, making it extremely competitive in terms of product quality and speed of turnover. Materials are available in a broad range of sizes, ensuring a substantial reduction in production times. They have a registered office in Germany and a German partner able to guarantee all the necessary technical and commercial support, available to clients for any consultancy or working needs.

About the company

Arostec operates in the sector of injection moulding and handling of plastic materials. It offers industrial automation solutions based on customer requests. Starting from a feasibility study on the level of automation required, the enterprise supports the client at every step of project development until its realization and after-sales services.

Together with an engineering firm, Arostec offers analysis and EC certification services, both for new machineries and existing ones subject to inspection.

About the company

BOMAT Srl is specialized in designing and making special equipment and automation, as well as metallic bending production. Based on specific customers' requirements, it produces, assembles and tests in-house all the mechanical parts manufactured. The metallic bending division works with various materials, such as copper, aluminium, steel and stainless steel. All the processing is being carried out on CNC machines and the innovative tube bending technology ensures high precision, efficient production and cost reduction.

About the company

Fre Tor Srl is part of the Brovedani Group which is specialized in the production of precision mechanical components and special machinery for process automation. Fre Tor aims at innovating production processes to optimize costs and resources. Thorough the implementation of lean manufacturing principles, wastage is eliminated in order to boost productivity. Fre Tor supports its customers from the initial analysis and co-design phase, to the installation and maintenance of machineries. Moreover, it re-condition machineries already in use to improve their efficiency and extend their useful life.

Laser cutting
Metal sheet processing

About the company

Aussafer Due is market leader in supplying services of precision laser cutting, metal sheet processing and metal fabrication, a reference point in the domestic and international markets with a dedicated Business Unit for the service of laser cutting and stacking of laminations for electrical machines. Services offered include: precision laser cutting (electromechanical components and parts for rotating machines), punching, panel bending, press braking, metal fabrication. Complementary operations as integration to the manufacturing process comprise: waterjet cutting, sheet metal edging, treatments, additional operations and processes.

About the company

Essepi Snc was founded in 1998 and is specialized on metal sheet processing. Its objective is to satisfy customers' requests offering a full-service from cutting and materials supply to finishings and final product. Main services offered are laser cutting, GMAW, GTAW, bending, CNC production, tumble finishing and polishing. Thanks to solid collaborations with local companies, it also manages laser cutting, hot-dip/cold galvanizing and painting beyond others.

Sheet metal cutting
Sheet metal pressing
Light metalworking

About the company

Gobbo A. & Dal Ben G. srl is specialized in sheet metal working and precision light metalworking. It works alongside companies from different industrial sectors for the creation of designed based metal parts: from laser cutting, shearing, cold forming of metal sheets, to punching and bending, up to welding and assembling components and products made of iron, stainless steel, aluminum and hardened/hardenable metals.

Metal sheet processing
Tubular processing

About the company

Officine G.S.P. is a leading metal fabrication company which offers a range of specific high-tech metalworking services for the metal fabrication sector, such as high-quality sheet and tubular carbon steel, stainless steel, aluminium, copper and brass metal products. Versatility and flexibility for any kind of metal fabrication, special advice and co-design, cutting edge technology and high-quality materials are just some of the strengths of Officine G.S.P.

Metal sheet processing
Carpentry
Powder coating

About the company

Postir Srl operates in the sheet metal processing sector. It uses technologically advanced machinery for various processes and treatments on stainless steel, aluminium and iron sheets. In the production process sheets and details are processed, treated and painted in series according to customer requirements. The process starts with technical project development thanks to one-to-one meetings with the customer and ends with samples making and "just in time" delivery lots.

Carpentry
Metal sheet processing

About the company

ROS srl is specialized in contract machining and processing of steel, stainless steel and aluminium sheet materials. Its services include laser cutting, punching, bending, welding, powder coating, and assembly services. It uses the most modern technologies available on the market and offers support to customers throughout the entire production process, from co-design to delivery of the finished product. With its fully-equipped metrology room, Ros guarantees the utmost precision and quality of the work as defined by the design specification.

Powder coating

About the company

Saratoga S.r.l. is a leading Italian company in the design and manufacture of customized simulation units for teaching and professional furniture for dental clinics and dental laboratories.

Since 1973, thanks to an internal painting plant it is also offering a powder coating service.

In September 2021, the company completed the installation of a brand-new spray booth.

It is equipped with

- 3D scanner
- Powder dispensing through dense phase system
- Ultrasonic sieve

to ensure even better and constant paint quality.

Martinuzzo Emilio di Martinuzzo Gino & C. S.A.S.

Mould design
Mould construction

About the company

For over seventy years Martinuzzo Emilio&C. s.a.s. has been offering specialized solutions for the construction of moulds and for cold forging of metal parts. It offers a comprehensive set of solutions. Indeed, it supports the client in designing the project study, it performs the simulations and designs the mould, as well as develops the prototypes and samples. In addition, Martinuzzo Emilio&C. s.a.s. presses metal parts in various materials: stainless steel, aluminum, iron, brass, silver nickel.

Mould prototyping
Mould construction

About the company

Siom Termoplast Srl is specialized in mould prototyping and construction. Thanks to its highly advanced technology and fine craftsmanship it develops each project from beginning to end, managing each productive process in-house:

- product concept, design and engineering;
- manufacturing prototypes;
- design and construction of prototype moulds and high production moulds;
- plastic (and other materials) moulding;
- aesthetic finishing.

Mould design
Mould construction

About the company

Since 1981, S.T.F. Snc is specialized in constructing moulds for plastics and zamak die-casting moulds. It has a consolidated experience in producing mono-material, bi-material, tri-material, sandwich and unscrewing moulds. S.T.F. Snc produces and manages moulds up to 12.000 kg. The production process is supported by the latest technological advancements to increase its efficiency and value creation. It supports its customers from the product co-design stage, to the final product creation and maintenance over time.

Boss Technologies Srl

Waterjet, plasma and laser cutting
Hybrid solutions

About the company

BOSS Technologies Srl is an international reference point in the construction and sale of water-jet, plasma and laser cutting systems. The goal of the company is to create and develop new products and cutting-edge consulting services maximizing qualitative performance. Systems have been designed and built to be used in all cutting sectors and in the various 2D / 3D cutting solutions with easily available and replaceable stock pieces, guaranteeing their technical and economic value over time. Products are characterized by a high-degree of modularity, flexibility, reparability, and hybrid technology.

3D Printing
Additive Manufacturing
Polymers

About the company

CAM85 is one of the reference companies in the world of Fincantieri in the field of light carpentry and precision assembly. It offers a 3D printing service for designers, craftsmen, and industries that need prototypes, unique objects or small series, reducing costs and delivery times. The technology made available by CAM85 allows customers to give shape to their ideas by creating even the most complex prototypes in a fast and precise way. The process aims at reducing waste employing recyclable materials and scraps.

Engineering
R&D
Mechatronics

About the company

CPI-ENG was born as an engineering firm specialized in mechanical design. Over the years skills and knowledge have increased, offering advanced engineering, prototyping and manufacturing services applied to different industrial sectors. CPI high level of specialization and transversal competences allow for supporting customers' technical departments in the development of projects or machines, device and equipment, keeping in mind customers' business structure and processes. CPI-ENG support companies in their automation projects, realizing what is needed for sensors set up, wiring, mechanical supports and protections.

CPI is also involved in automatic quality control solutions developed used Machine and Deep Learning.

Switchboards
Electrical wiring

About the company

Eurocablaggi Srl has been working for over 35 years in the industrial wiring and harnesses field. It produces switchboards and control panels thanks to a selection of the most suitable materials. In order to ensure durability and protection, it applies resin coating on circuit boards thanks to both bi-component and multi-component application systems. To ensure total quality, Eurocablaggi employs a Lean Production manufacturing process consisting of accurate control of components, testing and ESD PROTECT assembly lines to reduce the risk of electrostatic discharges.

Lean Manufacturing solutions

About the company

LeanProducts Srl is a leading company in the marketing of components and solutions for lean manufacturing. It offers one step ahead solutions for manufacturing efficiency and optimization to implement products and is a valuable partner to support daily challenges in many industrial sectors. It allows to achieve precise and measurable objectives through a variety of services: inventory reduction through the Kanban system, production and material flows through an innovative system for material handling, reorganization of the workplace according to the principles of ergonomics, improvement of communication through lean visual management, Industry 4.0 solutions and collaborative mobile robots for logistic automation.

About the company

METLAB Srl is a metrological Laboratory founded in 2007 specialized in calibration and verification of measurement equipment and a valuable partner for metrological support. Since 2008, it is TÜV Italy Qualified Laboratory for the calibration of measuring devices supplied to the support networks of the most prestigious automobile manufacturers. For temperature measurements, METLAB Laboratory is accredited by ACCREDIA, the sole national accreditation body in Italy, which recognized the competence of the Laboratory and the compliance with the requirements defined by the international standard UNI CEI EN ISO / IEC 17025. The recognition of Laboratory LAT (Accredited Calibration Laboratory) falls within the ILAC / MRA Mutual Recognition Agreements and therefore has international validity.

Its Medical Division MET-LIFE offers electrical safety check services, maintenance of the essential requirements of the medical devices.
